\*\*\* ANNOUNCEMENT \*\*\*

\*\*\*

--File 581 - The 2003 annual reload of Population Demographics is complete. Please see Help News581 for details.

\*\*\*

--File 990 - NewsRoom now contains February 2003 to current records.  
File 992 - NewsRoom 2003 archive has been newly created and contains records from January 2003. The oldest months's records roll out of File 990 and into File 992 on the first weekend of each month. To search all 2003 records BEGIN 990, 992, or B NEWS2003, a new OneSearch category.

\*\*\*

--Connect Time joins DialUnits as pricing options on Dialog. See HELP CONNECT for information.

\*\*\*

--CLAIMS/US Patents (Files 340,341, 942) have been enhanced with both application and grant publication level in a single record. See HELP NEWS 340 for information.

\*\*\*

--SourceOne patents are now delivered to your email inbox as PDF replacing TIFF delivery. See HELP SOURCE1 for more information.

\*\*\*

--Important news for public and academic libraries. See HELP LIBRARY for more information.

\*\*\*

--Important Notice to Freelance Authors--  
See HELP FREELANCE for more information

\*\*\*

ABSTRACT: A potentially lethal inhabitant in many offices is outdated  
 office equipment. Office workers should take a few minutes to play  
 archeologist to determine whether their office equipment is harming their  
 productivity and, therefore, deadly to their bottom line. Types of office  
 equipment that may need to be updated include: copiers, fax machines, time  
 and attendance systems and mailroom equipment.

**ABSTRACT:** The use of software packages at 14 organizations is described. Among the packages discussed are: the PAS systems software management package from Morino Associates used by the State of Minnesota's Information Management Bureau (IMB); the Dataware Conversion Services package from Computer Task Group used by Borg-Warner Automotive; the Payroll-Personnel Human Resource Management and General Ledger and Financial Reporting packages from Computer Associates International used by Del Taco; and The Monitor for CICS from Landmark Systems used by Hospital Corporation of America (HCA). Also described are: the Federal Home Loan Bank of San Francisco's use of Execucom Systems's IFPS-Plus financial modeling and analysis package; the Public Affairs Resource Group of Toronto's use of Xios's Renaissance package; and Pioneer Electronics's use of VM Software's VMBackup.

**Activity-based costing in government: Possibilities and pitfalls**

Brown, Richard E; Myring, Mark J; Gard, Cadillac G

Public Budgeting & Finance v19n2 PP: 3-21 Summer 1999 ISSN: 0275-1100

JRNL CODE: PBF

WORD COUNT: 7684

**ABSTRACT:** Activity-based costing (ABC) is at the center of the larger management perspective known as activity-based management, or ABM. Despite its popularity in the literature, relatively little is still known about the details of ABC, especially in government circles. There are many unanswered questions relating to the details of how to go about implementing ABC, its possible uses, and its costs and benefits. Some of these concerns are addressed by presenting the conceptual underpinnings and details of ABC, contrasting the system with more traditional cost accounting systems, discussing the fit of ABC in government, and considering in some detail how one small city might benefit from implementing ABC.

**ABSTRACT:** Business mail - paper-based communications flowing to, from and within business enterprises - has experienced explosive growth over the past 100 years. Sleek and efficient as electronic communication can be, it still does not match the warm and friendly impact of a paper missive. As a result, the practicality and convenience of paper-based mail continues to rank high among business communicators.

**Mail center security**

Giusti, Christopher; O Hara, Shaun M

Security Management v42n11 PP: 61-66 Nov 1998 ISSN: 0145-9406

JRNL CODE: SEM

WORD COUNT: 2698

**ABSTRACT:** The corporate mail room is a major gateway into any business or government agency. Yet, many managers overlook security procedures for this critical nerve center. A mail room security program should be divided into two components. First, the security manager should develop a plan to safeguard the mail room against theft, fraud, and other crimes. Second, mail room employees should be trained on mail screening techniques to protect the company against the slim possibility of a mail bomb. Location and design are important components of a mail room security program. The mail room should be located on a street-level floor, away from most other operations. It should have its own exterior door. The mail room should also be designed such that only authorized employees can gain access. Preemployment screening should be conducted on all potential mail room employees. The mail center should have security procedures and internal controls.

**Don't get spammed**

Gaskin, James E

Informationweek n644 PP: 53-64 Aug 18, 1997 ISSN: 8750-6874

JRNL CODE: IWK

WORD COUNT: 2428

**ABSTRACT:** UCE, or unsolicited commercial e-mail, is the latest euphemism for spam. Spammers' tactics have degenerated into deceit, fraud, forged return addresses, theft of service, and threats of violence. Netscape Communications has been the target of both incorrect From addresses and attempts to use Netscape's corporate mail servers to relay spam. Netscape now has anti-relaying features in its Messaging server for just these reasons. Messages with suspicious return addresses, or ones that attempt to send multiple E-mail copies, are dumped automatically. The first step in solving the spam problem is blocking E-mail from known bad addresses. The next step is to verify each incoming E-mail message by checking the authenticity of the supposed sender. Content filtering may be the ultimate weapon against the minions of spam. Integralis Inc.'s MIMESweeper filters, called Content Security Elements, include options for incoming and outgoing

E-mail, as well as Web browsing. The anti-spam features of mail servers from Lotus Development, Microsoft, Ipswitch, Netscape Communications, and Software.com and briefly described.

**Metro Navigator**

Ayan, Jordan E

Inc. v18n17 (Inc. Technology Supplement) PP: 115 1996 ISSN: 0162-8968

JRNL CODE: INO

WORD COUNT: 558

ABSTRACT: Metro Navigator, from Philips Media, is a new software package that helps one navigate an intra-city trip. The user begins by entering the starting and ending locations. The software then calculates the route. It prints out detailed turn-by-turn travel directions and displays and prints a customized map. There are 2 drawbacks. First, the Metro Navigator can only be used for 8 US cities. Second, the shortest distance between 2 points is not always the fastest route when traffic is factored in.

**Is the bomber on your payroll?**

Anonymous

Fortune v132n4 PP: 95; European 59 Aug 21, 1995 ISSN: 0015-8259

JRNL CODE: FOR

WORD COUNT: 577

ABSTRACT: In an interview, Jim Freeman, head of the FBI task force hunting the Unabomber, discussed the case. Instead of relying on a psychological profile, Freeman would rather the public read the Unabomber's own letters and filter those through their own experience of who they know. CEOs should have in place protection for front-line persons down in the mail room.

**How safe is your mail center? (Are you sure?)**

Fernberg, Patricia M

Managing Office Technology v38n9 PP: 29-30 Sep 1993 ISSN: 1070-4051

JRNL CODE: MOP

WORD COUNT: 1376

ABSTRACT: Mailroom security depends on 3 factors: personnel, place, and procedures. Procedures probably play the largest role of the 3 components. Logging registered mail and disbursements of stamps and petty cash and controlling access to it, videotaping cash and material handling areas, controlling meter usage, and using a chargeback system on the postage meter can save thousands of dollars every year.

**For Pitney Bowes, a Federal Plan May Spell Profit**

(Some analysts say Pitney Bowes may not be badly damaged, and could even benefit by new USPS regulations for postal meters)

New York Times , v CXLV, n 50,537, p 3;3

September 01, 1996

DOCUMENT TYPE: National Newspaper ISSN: 0362-4331 (United States)

LANGUAGE: English RECORD TYPE: Abstract

**ABSTRACT:**

Some analysts say Pitney Bowes may not be badly damaged, and could even benefit by new US Postal Service (USPS) regulations for postal meters. The company has 85% of the leased **postal meter** market, but the new USPS regulations call for the mechanical meters to be replaced with electronic and computer-based digital meters. However, Pitney Bowes could benefit by the new rules because the new meters, which will offer users added convenience, will cost more than the old ones, but will be cheaper to produce, service and **inspect** against fraud; this could mean more profits per machine. In addition, new features could open use of the machines to small companies that have not used postal meters in the past. Even more customers could be drawn to the new meters as they likely become cheaper in time. Only 15% of the 10 mil US businesses use metered mail. Postal meters account for 14% of Pitney Bowes' \$3.5 bil in revenue.

**How safe is your mail center? (Are you sure?) (theft in mail centers)**

Fernberg, Patricia M.

Managing Office Technology, v38, n9, p29(2)

Sept, 1993

ISSN: 1070-4051 LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT; ABSTRACT

WORD COUNT: 1477 LINE COUNT: 00115

**ABSTRACT:** Mail centers have the potential to be hotspots of employee theft due to poor personnel screening, improper facility layout and sloppy procedures. According to the US Postal **Inspection** Service, the percentage of arrests made in corporate and military mailrooms is increasing. Stolen items include confidential information, goods and cash. Employers should always check a potential employee's police record and references. A center's layout should be set up so that stamps and cash are dispersed in a limited-access area. Personal belongings should be kept in a separate room or in lockers. Procedures should include logging registered mail and monitoring mail and cash handling areas with videocameras. Common meter abuse can be controlled by conducting spot inspections and by comparing settings with postal records.

ABSTRACT: The use of software packages at 14 organizations is described. Among the packages discussed are: the PAS systems software management package from Morino Associates used by the State of Minnesota's Information Management Bureau (IMB); the Dataware Conversion Services package from Computer Task Group used by Borg-Warner Automotive; the Payroll-Personnel Human Resource Management and General Ledger and Financial Reporting packages from Computer Associates International used by Del Taco; and The Monitor for CICS from Landmark Systems used by Hospital Corporation of America (HCA). Also described are: the Federal Home Loan Bank of San Francisco's use of Execucom Systems's IFPS-Plus financial modeling and analysis package; the Public Affairs Resource Group of Toronto's use of Xios's Renaissance package; and Pioneer Electronics's use of VM Software's VMBackup.

**Tips for mailroom security: Mailroom workers shouldn't be hired before their honesty is determined.**  
Small Business Report October, 1980 p. 71

The mail area should be secured against unauthorized personnel and locked when possible. A sign-in sheet for entering and leaving, including times of arrival and departure may be helpful. Controls to determine individual responsibility for any losses should be established if the mailroom handles company funds. Adhesive postage stamps in unlocked drawers can be a potential danger and the postage meter should be locked when not in use. Postal regulations requiring postage meter tapes be placed in the upper right corner of the address label or tag helps deter theft by overlabeling, which can divert the package to an address controlled by the thief. An employee should be designated to maintain Form 3602-A, Daily Record of Meter Readings, and keep it in a location available to certified employees only. If currency or valuable mail is regularly sent or received, the times and paths of travel to the post office should vary; any unauthorized stops or unattended vehicles should be reported. The US Postal Service can put incoming mail into locked sacks, but the requesting firm has to supply locks and keys. Any employee caught stealing should be prosecuted; there is no greater deterrent. The Postal Inspection Service extends full cooperation in the investigation of any mail theft case.

**ABSTRACT:** Security managers can successfully protect the corporate mail room, a critical nerve center of every company, against theft, fraud and other crimes. Managers can institute a two-pronged mail room security program, which involves a plan to safeguard it against crimes and training of mail room employees on mail screening techniques. Other important components of such a program include the mail center's location and layout, preemployment screening on all potential employees, as well as security procedures and internal controls, such as restricted access to postage

meters and petty cash.

ABSTRACT: Mailroom equipment manufacturers have developed electronic postage meters to replace mechanical postage meters recently banned by the U.S. Postal Service. Pitney Bowes, Neopost, Ascom Hasler and Francotyp-Postalia have introduced new electronic **postage meter** systems which significantly reduce mail processing time. High-speed processing, automatic label dispensers, ink density adjustment and resettable counters are among the value-added features of the newly launched electronic **postage meter** systems.

**ABSTRACT:** The US Postal Service's new postal regulations may stimulate the mailroom equipment market. Mechanical postage meters will have to be removed from all businesses by Mar 1999, which could have a dramatic effect on the mailroom equipment market. In addition, First-Class, Second-Class, Third-Class and Fourth-Class mailing rates will be reformed to reward those that prepare their mail for automated processing.

ABSTRACT: Mail centers have the potential to be hotspots of employee theft due to poor personnel screening, improper facility layout and sloppy procedures. According to the US Postal **Inspection** Service, the percentage of arrests made in corporate and military mailrooms is increasing. Stolen items include confidential information, goods and cash. Employers should always check a potential employee's police record and references. A center's layout should be set up so that stamps and cash are dispersed in a limited-access area. Personal belongings should be kept in a separate room or in lockers. Procedures should include logging registered mail and monitoring mail and cash handling areas with videocameras. Common meter abuse can be controlled by conducting spot inspections and by comparing settings with postal records.

LINE COUNT: 00273

ABSTRACT: Corporations restructuring operations with quality as their benchmark, are reducing their number of suppliers and demanding total quality assurance as a prerequisite for continued business relationships. The introduction of statistical process control (SPC), a method of measuring and improving manufacturing processes, is often the basis for a quality-improvement program. Corporations are providing consulting help and training to suppliers, in many cases for free, for the introduction of SPC, just-in-time delivery techniques, and continuous supplier involvement. Several quality assurance programs are described, including programs at Pitney-Bowes Inc, Xerox Corp, and Ford Motor Co.

**Escher Group Receives Patent for Next Generation Postage Metering Technology**

BUSINESS WIRE

October 09, 2001

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 334

CAMBRIDGE, Mass.--(BUSINESS WIRE)--Oct. 9, 2001--Escher Group Limited, a leading provider of peer-to-peer messaging and data management solutions, announced today that the United States Patent and Trademark Office has issued Escher a notice of allowance for a patent on next generation postage metering technology.

The patent covers technology and methods for representing postage value and for downloading or otherwise loading postage value into a software-only **postage meter**. The technology allows software-only postage meters to print postage in an offline fashion, that is, without a network connection. Previous software-only systems required a connection to a central server at the time of postage printing. Systems that could print postage without a network connection have always required secure hardware. Escher's technology gives the best of both worlds: the convenience of an all software meter, and the convenience of offline postage printing.

TEXT:

Pitney Bowes Inc. of Stamford, Conn., has joined forces with the United States Postal Service (USPS) to help stamp out **postage meter** fraud. The corporation will match USPS awards up to \$50,000 for information leading to the arrest and conviction of anyone tampering with Pitney Bowes' postage meters.

Pitney Bowes has also initiated a series of related measures to detect and deter **postage meter** fraud. Jacqueline Allen, who was recently appointed vice president of **postage meter** repairers and other Pitney Bowes employees to recognize signs of tampering.

"We've instilling the belief among all our employees that **postage meter** security is everyone's responsibility," she says. "Every employee's job in Pitney Bowes includes the obligation to ensure the integrity of our meter system."

The two organizations are also working on developing a new type of **postage meter**, which will verify every piece of mail being sent. This meter is scheduled to be ready this spring.

Meanwhile, to bolster meter security efforts, a meter security coordinator has been assigned in every Pitney Bowes field office. The two organizations have also begun to share more **postage meter** security data, and are presently reexamining organizational procedures on **postage meter** handling.

Anyone detecting **postage meter** fraud can call the Postal Inspection Service at (800) 654-8896.
